

Getting Started Workshop: The Fragile Families Challenge

Matthew Salganik, Ian Lundberg, Alex Kindel, Sara McLanahan,
and people from around the world

Summer Institute in Computational Social Science
June 21 2019

Fragile Families Challenge is supported by the Russell Sage Foundation. Board of Advisors: Jeanne Brooks-Gunn, Kathryn Edin, Barbara Engelhardt, Irwin Garfinkel, Moritz Hardt, Dean Knox, Nicholas Lemann, Karen Levy, Sara McLanahan, Arvind Narayanan, Timothy Nelson, Matthew Salganik, Brandon Stewart & Duncan Watts.

Initial sequencing and analysis of the human genome

International Human Genome Sequencing Consortium*

** A partial list of authors appears on the opposite page. Affiliations are listed at the end of the paper.*

Genome Sequencing Centres (Listed in order of total genomic sequence contributed, with a partial list of personnel. A full list of contributors at each centre is available as Supplementary Information.)

Whitehead Institute for Biomedical Research, Center for Genome Research: Eric S. Lander¹, Lauren M. Linton¹, Bruce Birren¹, Chad Nusbaum¹, Michael C. Zody¹, Jennifer Baldwin¹, Keri Devan¹, Ken Dewar¹, Michael Doyle¹, William FitzHugh¹, Roel Funke¹, Diane Gage¹, Katrina Harris¹, Andrew Heaford¹, John Howland¹, Lisa Kann¹, Jessica Lebocky¹, Rosie LeVine¹, Paul McEwan¹, Kevin McKernan¹, James Melkman¹, Jill P. Mesirov¹, Cher Miranda¹, William Morris¹, Jerome Naylor¹, Christine Raymond¹, Mark Roselli¹, Ralph Santos¹, Andrew Sheridan¹, Carrie Sougnez¹, Nicole Stange-Thomann¹, Nikola Stojanovic¹, Aravind Subramanian¹, & Dudley Wymant¹

The Sanger Centre: Jane Rogers², John Sulston², Rachael Ainscough², Stephan Beck², David Bentley², John Burton², Christopher Cleef², Nigel Carter², Alan Coulson², Rebecca Deadman², Panos Deloukas², Andrew Dunham², Ian Dunham², Richard Durbin², Lisa French², Darren Graffham², Simon Gregory², Tim Hubbard², Sean Humphray², Adrienne Hunt², Matthew Jones², Christine Lloyd², Amanda McMurray², Lucy Matthews², Simon Mercer², Sarah Milne², James C. Mullikin², Andrew Mungall², Robert Plumb², Mark Ross², Ratna Showker², & Sarah Sims²

Washington University Genome Sequencing Center: Robert H. Waterston³, Richard K. Wilson³, LaDeana W. Hillier³, John D. McPherson³, Marco A. Marra³, Elaine R. Mardis³, Lucinda A. Fulton³, Asil T. Chinwala³, Kymberlie H. Pepin³, Warren R. Gish³, Stephanie L. Chaisson³, Michael C. Wendt³, Kim D. Delehaunty³, Tracie L. Miner³, Andrew Delehaunty³, Jason B. Kramer³, Lisa L. Cook³, Robert S. Fulton³, Douglas L. Johnson³, Patrick J. Minx³ & Sandra W. Clifton³

US DOE Joint Genome Institute: Trevor Hawkins⁴, Elbert Branscomb⁴, Paul Pukall⁴, Paul Richardson⁴, Sarah Wenning⁴, Tom Slezk⁴, Norman Doggett⁴, Jan-Fang Cheng⁴, Anne Olsen⁴, Susan Lucas⁴, Christopher Elkin⁴, Edward Überbacher⁴ & Marvin Frazier⁴

Baylor College of Medicine Human Genome Sequencing Center: Richard A. Gibbs⁵, Donna M. Muzny⁵, Steven E. Scherer⁵, John B. Bouck⁵, Erica J. Sodergren⁵, Kim C. Worley⁵, Catherine M. Rives⁵, James H. Gorrell⁵, Michael L. Metzker⁵, Susan L. Nayor⁵, Raju S. Kucherlapati⁵, David L. Nelson⁵, & George M. Weinstock⁵

RIKEN Genomic Sciences Center: Yoshiyuki Sakai⁶, Asoo Fujiyama⁶, Masaharu Hattori⁶, Tetsushi Yada⁶, Atsushi Toyoda⁶, Takehiko Itoh⁶, Chiharu Kawabe⁶, Hiromi Watabayashi⁶, Yasutomo Totoku⁶ & Todd Taylor⁶

Genoscope and CNRS UMR-8030: Jean Weissenbach⁷, Roland Hellier⁷, William Saurin⁷, Francois Arigonave⁷, Philippe Brotte⁷, Thomas Brule⁷, Eric Pelletier⁷, Catherine Robert⁷ & Patrick Wincker⁷

GTC Sequencing Center: Douglas R. Smith¹¹, Lynn Doucette-Stamm¹¹, Marc Rubenfield¹¹, Keith Weinstock¹¹, Hong Mei Lee¹¹ & JoAnne Dubois¹¹

Department of Genome Analysis, Institute of Molecular

Biotechnology: André Rosenthal¹², Matthias Platzer¹², Gerald Nyakatura¹², Stefan Taudien¹² & Andreas Rump¹²

Beijing Genomics Institute/Human Genome Center: Huanning Yang¹³, Jun Yu¹³, Jian Wang¹³, Guyang Huang¹⁴ & Jun Gu¹⁵

Multimegapbase Sequencing Center, The Institute for Systems Biology: Leroy Hood¹⁶, Lee Rowen¹⁶, Anup Madan¹⁶ & Shizhen Qin¹⁶

Stanford Genome Technology Center: Ronald W. Davis¹⁷, Nancy A. Federspil¹⁷, A. Pla Abols¹⁷ & Michael J. Proctor¹⁷

Stanford Human Genome Center: Richard M. Myers¹⁸, Jeremy Schmutz¹⁸, Mark Dickson¹⁸, Jane Grimwood¹⁸ & David R. Cox¹⁸

University of Washington Genome Center: Maynard V. Olson¹⁹, Rajinder Kaul¹⁹ & Christopher Raymond¹⁹

Department of Molecular Biology, Keio University School of Medicine: Nobuyoshi Shimizu²⁰, Kazuhiko Kawasaki²⁰ & Shinsei Minoshima²⁰

University of Texas Southwestern Medical Center at Dallas: Glen A. Evans²¹, Maria Athanasiou²¹ & Roger Schultz²¹

University of Oklahoma's Advanced Center for Genome Technology: Bruce A. Roe²², Feng Chen²² & Huaqin Pan²²

Max Planck Institute for Molecular Genetics: Juliane Ramser²³, Hans Lehrach²³ & Richard Reinhardt²³

Cold Spring Harbor Laboratory, Lita Annenberg Hazen Genome Center: W. Richard McCombie²⁴, Melissa de la Bastide²⁴ & Neillay Dedhia²⁴

GBF—German Research Centre for Biotechnology: Helmut Blöcker²⁵, Klaus Hornischek²⁵ & Gabriele Nordsiek²⁵

*** Genome Analysis Group** (listed in alphabetical order, also includes individuals listed under other headings):

to improve the lives of disadvantaged children in the US.

FFragile Families

& Child Wellbeing Study
PRINCETON | COLUMBIA

- ▶ Birth cohort panel study
- ▶ ≈ 5,000 children born in 20 U.S. cities
- ▶ Followed from birth through age 15

Key research question: What can be done to improve the life chances of disadvantaged children?

Hundreds of papers and dozens of dissertations

<http://crcw.princeton.edu/publications/publications.asp>

Social Scientists ←→ Data Scientists

Social Scientists \longleftrightarrow Data Scientists

$$\hat{\beta} \quad \& \quad \hat{y}$$

Mullainathan and Spiess (2017):

<http://dx.doi.org/10.1257/jep.31.2.87>

Why should we care about the predictability of social outcomes?

- ▶ Scientific reasons

Why should we care about the predictability of social outcomes?

- ▶ Scientific reasons
- ▶ Policy reasons

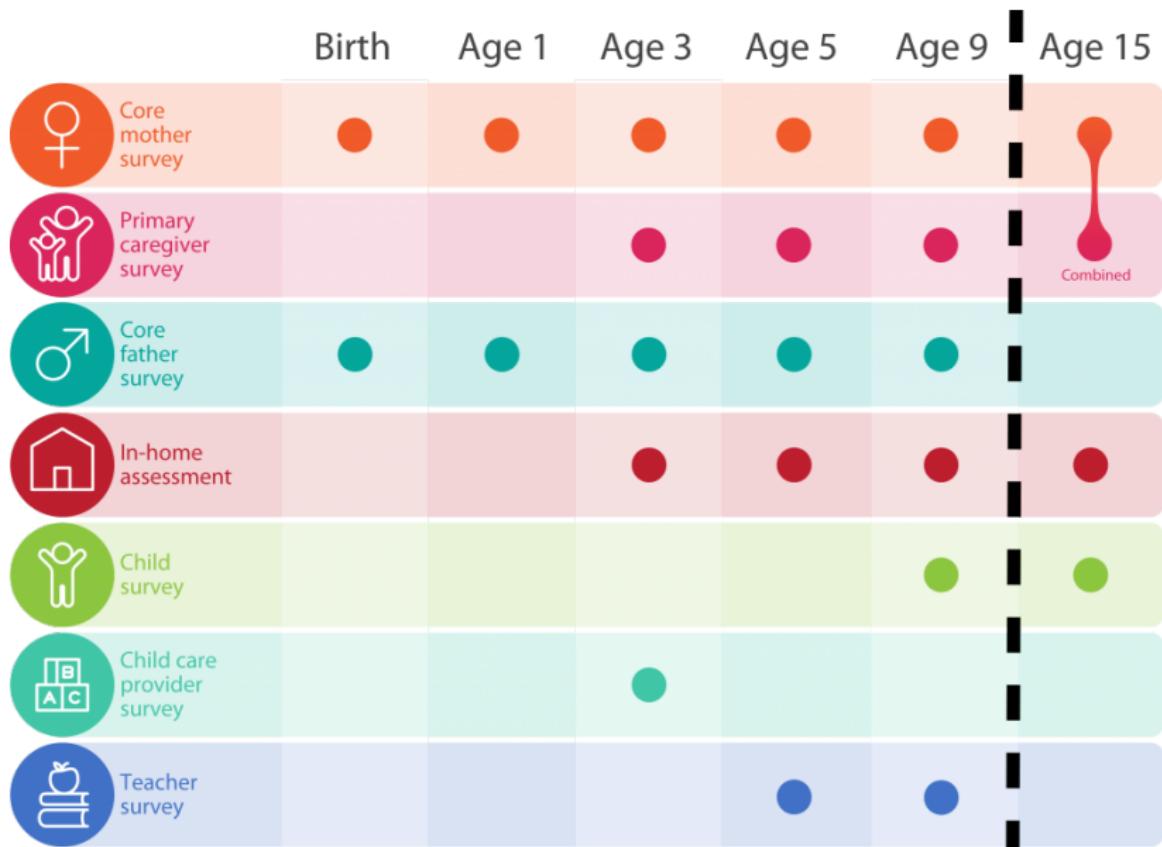

Can an Algorithm Tell When Kids Are in Danger?

Child protective agencies are haunted when they fail to save kids. Pittsburgh officials believe a new data analysis program is helping them make better judgment calls.

By DAN HURLEY JAN. 2, 2018

We need to understand the strengths *and* weakness of predictive models of social behavior

Material hardship

We are also interested in some of the problems that families face making ends meet. In the past twelve months, did you do any of the following because there wasn't enough money?

		YES	NO	REF	DK
J37.	In the past twelve months, did you receive free food or meals?	1	2	-1	-2
J38.	In the past twelve months, were you ever hungry, but didn't eat because you couldn't afford enough food?	1	2	-1	-2
J39.	In the past twelve months, did you ever not pay the full amount of rent or mortgage payments?	1	2	-1	-2
J40.	In the past twelve months, were you evicted from your home or apartment for not paying the rent or mortgage?	1	2	-1	-2
J41.	In the past twelve months, did you not pay the full amount of gas, oil, or electricity bill?	1	2	-1	-2
J42.	In the past twelve months, was your gas or electric services ever turned off, or the heating oil company did not deliver oil, because there wasn't enough money to pay the bills?	1	2	-1	-2
J43.	In the past twelve months, did you borrow money from friends or family to help pay bills?	1	2	-1	-2
J44.	In the past twelve months, did you move in with other people even for a little while because of financial problems?	1	2	-1	-2

Material hardship

J45.	In the past twelve months, did you stay at a shelter, in an abandoned building, an automobile or any other place not meant for regular housing, even for one night?	1	2	-1	-2
J46.	In the past twelve months, was there anyone in your household who needed to see a doctor or go to the hospital but couldn't go because of the cost?	1	2	-1	-2
J47.	In the past twelve months, was your telephone service (mobile or land line) cancelled or disconnected by the telephone company because there wasn't enough money to pay the bill?	1	2	-1	-2

Eviction⁷

Introducing the data

The Fragile Families and Child Wellbeing Study is a dataset of real people who have selflessly opened up their lives to us for the last 15 years so that their experiences can contribute to scientific research. By participating in the Fragile Families Challenge, you become a collaborator in this project. It is of the utmost importance that you respect the families in the data by using what they have told us responsibly.

- ▶ Before you have access to the data, you will sign a data use agreement

- ▶ Before you have access to the data, you will sign a data use agreement
- ▶ After this activity you will delete the data from your computer

- ▶ Before you have access to the data, you will sign a data use agreement
- ▶ After this activity you will delete the data from your computer
- ▶ If you want to keep working with the data afterwards, you can apply for access through the Fragile Families website

How do I know what these variables are?

The screenshot shows a web browser window with the title bar "FFCWS Metadata | Variables". The address bar contains the URL "browse.fragilefamiliesmetadata.org/variables". The main content area features the Fragile Families & Child Wellbeing Study logo, which includes a large stylized "FF", the text "Fragile Families", "& Child Wellbeing Study", and "PRINCETON | COLUMBIA". To the right of the logo is a grid of nine small photographs depicting various family and child scenarios. Below the logo is a navigation bar with links: "FFCWS Metadata", "Browse variables", "Download metadata", "Feedback", and "About FFCWS". The main search interface is titled "Search variables" and includes a search bar with placeholder text "Search for..." and a "Search »" button. A "Filter" section contains three dropdown menus labeled "Topic", "Wave", and "Respondent".

Introducing cm1relf

metadata.fragilefamilies.princeton.edu/variables/cm1relf

You can filter variables by:

- ▶ Topic
- ▶ Wave
- ▶ Respondent
- ▶ Variable Type (e.g., continuous, ordered categorical, unordered categorical, etc).

Why cm1relf?

Why cm1relf?

Response type	Respondent	Wave	Leaf
(blank): questionnaire c: constructed	m - mother f - father p - primary caregiver k - child t - teacher h - home o - observations n - non parental caregiver d - child care center r - family care center u - post center observations q - couple	1 - baseline 2 - year 1 3 - year 3 4 - year 5 5 - year 9 6 - year 15	(letter): survey section + (number): question number OR (string): Constructed variable ID OR (string): national or city weight

Want direct access to the metadata?

Data

Data are free to download from Princeton University's [Office of Population Research \(OPR\) data archive](#).

Currently, there are five waves of publicly available data including baseline and Year 1, Year 3, Year 5, and Year 9 follow-ups. In order to protect the confidentiality of survey respondents, geographic identifiers, medical records data, contextual data (i.e., census tract characteristics), macroeconomic indicators, and genetic biomarkers are not available in the public use data files. Researchers may apply for these data via a [restricted use contract](#).

Contract Data

Year 9

The Year 9 follow-up wave of data collection took place from 2007 to 2010, which makes the data useful for researchers interested in the effects of the Great Recession on children and families. It is different from previous waves because the home visit was integral to the wave procedures. In previous waves, we conducted core interviews before proceeding to the in-home components. At year 9, our initial interview was with the child's primary caregiver (usually the mother) and we scheduled a home visit at the time of that initial interview. As part of the home visit, we interviewed focal children for the first time. We attempted teacher surveys through the mail. Similar to previous waves, we have core interviews with mothers and fathers. Restricted Data at this wave include [census tract characteristics](#) of mother and father residences, [macroeconomic indicators](#), administrative data on children's [school characteristics](#), and [genetic](#) data from saliva samples from the mother and focal child.

Advice

Most good approaches will likely involve

Most good approaches will likely involve

- ▶ careful data preparation

Most good approaches will likely involve

- ▶ careful data preparation
- ▶ flexible models that avoid overfitting

Common missing codes¹³

Not all missing data is the same

- ▶ -9 Not in wave - Did not participate in survey/data collection component
- ▶ -6 Valid skip - Intentionally not asked question; question does not apply to respondent or response known based on prior information.
- ▶ -2 Don't know - Respondent asked question; responded "Don't Know".
- ▶ -1 Refuse - Respondent asked question; refused to answer question
- ▶ NA also used occasionally

¹³For more complete list and explanation, see
<http://www.fragilefamilieschallenge.org/missing-data/>

How can you optimally combine human and machine effort?

How can you optimally combine human and machine effort?

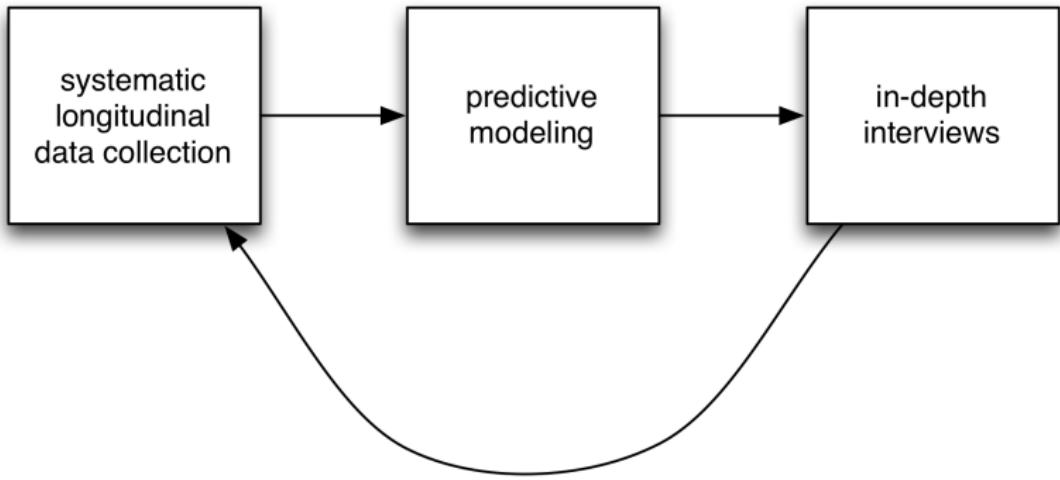

- ▶ automatic feature selection
- ▶ human-assisted automatic feature selection
- ▶ computer-assisted human feature selection
- ▶ human feature selection
- ▶ some other hybrid
